Spectrographical observations are taken out with the DADOS Spectrograph of [Baader Planetarium](#).

The DADOS Spectrograph

Invalid Link

Our DADOS Spectrograph

Manual

[User's Guide \(PDF\)](#)

The basic data are taken from the Baader-webpage.

Grating	Dispersion at 550nm		Spectral resolution $\frac{\lambda}{\Delta\lambda}$ at 550nm with the 3 slit widths			Covered Spectral range in nm	
	nm/mm	nm/9 μ m Pixel	25 μ m	35 μ m	50 μ m	ST-7	ST-8
200	47,61	0,443	543	388	272	328	656
900	12,67	0,114	3818	2727	1909	87	174

Representative spectra that were taken with our DADOS spectrograph can be found [here](#).

The BACHES Echelle Spectrograph

The new Echelle Spectrograph of Baader, which has been developed by the Max-Planck-Institut for extraterrestrial physics, has the following properties

- Resolution: $R = \frac{\lambda}{\Delta\lambda} = 14,000-20,000$
- Wavelength range: $\lambda = 400-700$ nm (without gaps)
- maximum efficiency: 31%
