

# Our mobile telescopes

Besides our fixed main telescope, the [CDK20 from Planewave](#), our telescope family currently includes the following telescopes:

## Schmidt Cassegrain telescopes from Celestron

We have a total of three of these telescopes in different sizes ranging from 8" to 11" and up to 14".

### The C14

The C14 on the GM4000 QCI

<b>Type</b>	Schmidt-Cassegrain
<b>Manufacturer</b>	Celestron
<b>Aperture</b>	356 mm
<b>Focal Length</b>	3910 mm
<b>f/Ratio</b>	11
<b>Spatial resolution</b>	0.33"
<b>Length of the tube</b>	78 cm
<b>Weight</b>	20,4kg
<b>Mirror coating</b>	StarBright™ XLT multicoating
<b>Fastar compatible</b>	No

The C14 is our largest Schmidt Cassegrain telescope. It can be mounted on either the [CGE-Pro](#) or the CGX-L mount from Celestron. Before we got the CDK-20, the C14 used to be our main fixed telescope. The C14 cannot be used for solar observations. The setup and operation is basically equivalent to the [C11](#). The setup of the CGX-L differs only in a few points from the CGE-Pro. However, the CGX-L is somewhat easier to handle than the CGE-Pro.

### The C11

<b>Type</b>	Schmidt-Cassegrain
<b>Manufacturer</b>	Celestron
<b>Aperture</b>	279.4 mm
<b>Focal Length</b>	2800 mm
<b>f/Ratio</b>	10
<b>Spatial resolution</b>	0.41"
<b>Length of the tube</b>	61 cm
<b>Weight</b>	12,5kg

The C11 on the CGE Pro

<b>Mirror coating</b>	StarBright™ XLT multicoating
<b>Fastar compatible</b>	Yes

The C11 can be mounted on both Celestron's CGE-Pro and CGX-L mounts. We have a sun filter for the C11, so it can be used for solar observations. The [setup and operation of the C11 and the CGE-Pro](#) is described in a separate article. The setup of the CGX-L differs only in a few points from the CGE-Pro. However, the CGX-L is somewhat easier to handle than the CGE-Pro.

## The C8

<b>Type</b>	Schmidt-Cassegrain
<b>Manufacturer</b>	Celestron
<b>Aperture</b>	203.2 mm
<b>Focal Length</b>	2032 mm
<b>f/Ratio</b>	10
<b>Spatial resolution</b>	0.57"
<b>Length of the tube</b>	43.2 cm
<b>Weight</b>	5.67kg
<b>Mirror Coating</b>	StarBright™ XLT Multi-coating
<b>Fastar compatible</b>	Yes

The C8 comes with the Advanced GT mount from Celestron. As for the C11, we also have a solar filter for the C8. The [setup and operation of the C8 and the Advanced GT](#) is described in a separate article.

## Refracting telescopes

### The 130mm Apochromat from Teleskop-Service

<b>Type</b>	Apochromat
<b>Manufacturer</b>	TS-Optics
<b>Aperture</b>	130 mm

<b>Focal Length</b>	910 mm
<b>f/Ratio</b>	7
<b>Lens type</b>	FPL53 triplet
<b>Spatial resolution</b>	0.89"
<b>Weight</b>	11kg

Our triplet apochromatic refractor offers a wide field of view. The scope is usually used with the CGX-L. The setup and operation is almost identical to the [C11](#). The APO can also be used with the CGE-Pro.

### The Coronado H $\alpha$ solar telescope aka. the OSST

<b>Manufacturer</b>	Coronado
<b>Series</b>	Solar Max II
<b>Aperture</b>	60mm
<b>Focal length</b>	400mm
<b>f/Ratio</b>	6.6
<b>Bandwidth</b>	< 0.5
<b>Blocking filter</b>	BF10
<b>Other</b>	Richview tuning
::	Double Stacked
::	Sol Ranger Sunfinder

The Solar Max II on the Advanced GT

The OSST can be mounted on the Advanced-GT mount from Celestron. More details about the [OSST, its setup and operation](#) can be found in a separate article.
