

# Remmia

In this article we explain how one can remotely access our observatory by means of the Remote Desktop Protocol (RDP).

Linux: For Linux users we recommend *Remmina*, which is, to our knowledge, available in the repositories of all major distributions. Nevertheless, the following configuration is in principle transferable to any other RDP client.

After *Remmia* is started, the first thing to do is to create a new profile by clicking on the button in the upper left corner.

Windows:
