Our mobile telescopes

Besides our fixed main telescope, the [CDK20 from Planewave](#), our telescope family currently includes the following four telescopes:

Schmidt Cassegrain telescopes from Celestron

Have a total of three of these telescopes with varying dimensions. Starting at 8" over 11" up to 14".

The C14

The C14 on the GM4000 QCI

| | |
|----------------------------|------------------------------|
| Type | Schmidt-Cassegrain |
| Manufacturer | Celestron |
| Aperture | 356 mm |
| Focal Length | 3910 mm |
| Spatial Auflesivity | 0.33" |
| Length of the tube | 78 cm |
| Weight | 20,4kg |
| Mirror coating | StarBright™ XLT multicoating |
| Fastar compatible | No |

The C14 is our largest Schmidt Cassegrain telescope. It can be mounted on either the [CGE-Pro](#) or the CGX-L mount from Celestron. Before we got the CDK-20, the C14 used to be our main fixed telescope. The C14 cannot be used for solar observations. The setup and operation is basically equivalent to the [C11](#). The setup of the CGX-L differs only in a few points from the CGE-Pro. However, the CGX-L is somewhat easier to handle than the CGE-Pro.

The C11

| | |
|----------------------------|--------------------|
| Type | Schmidt-Cassegrain |
| Manufacturer | Celestron |
| Aperture | 279.4 mm |
| Focal Length | 2800 mm |
| Spatial Auflesivity | 0.41" |

The C11 on the CGE Pro

| | |
|---------------------------|------------------------------|
| Length of the tube | 61 cm |
| Weight | 12,5kg |
| Mirror coating | StarBright™ XLT multicoating |
| Fastar compatible | Yes |

The C11 can be mounted on both Celestron's CGE-Pro and CGX-L mounts. We have a sun filter for the C11, so it can be used for solar observations. The [setup and operation of the C11 and the CGE-Pro](#) is described in a separate article. The setup of the CGX-L differs only in a few points from the CGE-Pro. However, the CGX-L is somewhat easier to handle than the CGE-Pro.

The C8

| | |
|-----------------------------|-------------------------------|
| Type | Schmidt-Cassegrain |
| Manufacturer | Celestron |
| Aperture | 203.2 mm |
| Focal Length | 2032 mm |
| Spatial Auflesivitiy | 0.57" |
| Length of the tube | 43.2 cm |
| Weight | 5.67kg |
| Mirror Coating | StarBright™ XLT Multi-coating |
| Fastar compatible | Yes |

The C8 comes with the Advanced GT mount from Celestron. As for the C11, we also have a solar filter for the C8. The [setup and operation of the C8 and the Advanced GT](#) is described in a separate article.

Das Coronado-H α -Sonnenteleskop aka. das OSST

| | |
|------------------------|--------------|
| Hersteller | Coronado |
| Serie | Solar Max II |
| Öffnung | 60mm |
| Brennweite | 400mm |
| f/Ratio | 6.6 |
| Bandbreite | < 0.5 Å |
| Blocking filter | BF10 |

Das Solar Max II auf der Advanced GT

| | |
|------------------|-------------------------|
| Sonstiges | Richview tuning |
| | Double Stacked |
| | Sol Ranger Sonnenfinder |

Das OSST kann auf die Advanced-GT-Montierung von Celestron montiert werden. Mehr Details zum [OSST, dessen Aufbau und Bedienung](#) ist in einem eigenen Artikel zu finden.
